AMENDMENTS TO THE CLAIMS

The listing of claims is the same as the last listing of claims presented in Amendment A:

Listing of Claims:

1. (Previously Presented) In a video data recording system that is associated with a television on which a program can be displayed and includes a storage device for storing video data associated with the program, a method for optimizing the use of available storage space on the storage device, the method comprising the acts of:

receiving a request by a viewer for the system to record a first program on the storage device;

upon receiving the request from the viewer to record the first program, selectively assigning a first tag to said first program, wherein said first tag is used by the system to control, at least in part, recording of said first program, said first tag including at least one of a guaranteed tag, an optional tag or a priority tag, each of the guaranteed, optional and priority tags corresponding to different criteria for recording said program;

applying recording rules to said first tag to determine whether the request to record said first program is to be fulfilled; and

if it is determined that the request is to be fulfilled, automatically programming the system to record the first program on the storage device.

2. (Original) A method as recited in claim 1, wherein said first tag is automatically assigned by the system.

3. (Original) A method as recited in claim 1, wherein viewer input received by the system assigns said first tag to said first program.

4. (Original) A method as recited in claim 1, further comprising informing said viewer when insufficient space is available on the storage device to record said first program.

5. (Previously Presented) A method as recited in claim 1, wherein said first tag is a guaranteed tag for causing sufficient recording space on the storage device to be reserved when said request is received for recording said first program on the storage device as opposed to a time at which said first program is broadcast to the system.

6. (Original) A method as recited in claim 5, wherein:

said act of applying recording rules to the first tag to determine whether the request to record the first program is to be fulfilled comprises determining, at a time when said request is received, whether said sufficient storage space is available on the storage device to record said first program; and

said act of automatically programming the system to record the video data associated with said first program on the storage device comprises:

reserving said sufficient storage space for the recording of said first program if said sufficient storage space is available; and

automatically programming the system to record said first program in said sufficient storage space when said first program is broadcast.

7. (Original) A method as recited in claim 6, wherein if said sufficient storage space is not available, the method further comprises informing said viewer that insufficient storage space is available on the storage device to record said first program.

8. (Original) A method as recited in claim 1, wherein said first tag is an optional tag for causing said first program to be recorded on the storage device if sufficient storage space exists on the storage device when said first program is broadcast.

9. (Original) A method as recited in claim 8, wherein:

said act of applying recording rules to the first tag to determine whether the request to record the first program is to be fulfilled comprises determining, at the time when said first

Application No. 09/731,111
Amendment "B" dated March 14, 2006

program is to be broadcast, whether sufficient storage space is available on the storage device to record said first program; and

said act of automatically programming the system to record the video data associated with said first program on the storage device comprises recording said first program on the storage device if said sufficient storage space is available when said first program is broadcast.

10. (Original) A method as recited in claim 9, wherein if said sufficient storage space is not available when said first program is to be broadcast, the method further comprises informing said viewer that insufficient storage space is available on the storage device to record said first program.

11. (Original) A method as recited in claim 1, wherein said first tag identifies a first priority for recording said first program.

12. (Original) A method as recited in claim 11, further comprising the acts of:
receiving a request for the system to record a second program on the storage device; and
selectively assigning a second tag to said second program to identify a second priority for recording said second program on the storage device.

Application No. 09/781,111
Amendment "B" dated March 14, 2006
Reply to Office Action mailed December 14, 2005

13. (Original) A method as recited in claim 12, wherein when storage space available on the storage device is only sufficient to store data associated with one of said first program and said second program, the method further comprises the acts of:

determining which of said first priority and said second priority is a higher priority; and
overwriting said first program with said second program if said second priority is higher than said first priority.

14. (Original) A method as recited in claim 13, wherein if said first priority is a higher priority, the method further comprises the act of informing said viewer that insufficient space is available on the storage device to record said second program.

15. (Original) A method as recited in claim 11, further comprising the acts of:
comparing said first priority with a third priority corresponding to a third tag assigned to a previously recorded program stored on the storage device;
determining which of said first priority and said second priority is a higher priority; and
if said first priority is a higher priority, recording said first program over said previously recorded program.

16. (Original) A method as recited in claim 1, further comprising the act of recording said first program on the storage device.

17. (Original) A method as recited in claim 16, further comprising the acts of:
applying storage rules to said first tag to determine when said first program is to be deleted from the storage device; and
deleting said first program from the storage device.

Amendment "H" dated March 14, 2006
Reply to Office Action mailed December 14, 2005

18. (Previously Presented) In a video data management system that is associated with a television on which a program can be displayed and includes a storage device for storing video data associated with one or more recorded programs, a method for optimizing the availability of storage space on the storage device, the method comprising the acts of:

selectively assigning a first tag to a first recorded program to identify a first priority for maintaining said first recorded program on the storage device, wherein the first priority of the first tag changes after the first recorded program is viewed on the system;

determining whether said first recorded program is a partially recorded program;

applying storage rules to said first tag to determine whether to delete said first recorded program from the storage device, wherein it is determined that said first recorded program should be deleted when the first recorded program is a partially recorded program or when the priority of the first tag changes; and

if it is determined that said first recorded program is to be deleted from the storage device, automatically deleting said first recorded program from the storage device.

19. (Previously Presented) A method as recited in claim 18, wherein:

said act of applying recording rules to said first tag comprises:

indicating that said first recorded program is to be overwritten when a second program is recorded on the storage device if said first recorded program is a partial program.

20. (Original) A method as recited in claim 19, wherein if said first recorded program is a partial program, the method further comprises notifying a viewer that said first recorded program is to be overwritten when a second program is recorded on the storage device.

21. (Original) A method as recited in claim 18, wherein if said first tag includes a time for deletion, the method further comprises deleting said first recorded program from the storage device at said deletion time.

Amendment "B" dated March 14, 2006
Reply to Office Action mailed December 14, 2005

22. (Cancelled).

23. (Original) A method as recited in claim 18, further comprising the acts of:
determining whether said first recorded program is included in a defined bucket of related
programs; and
if said first recorded program is included in said defined bucket, further performing the
acts of:
determining a bucket size allocated for said bucket;
determining whether said bucket size is exceeded; and
deleting one or more recorded programs on the storage device if said bucket size
is exceeded.

Amendment "J" dated March 14, 2006
Reply to Office Action mailed December 14, 2005

24. (Previously Presented) An intelligent recording and management system for recording and managing video data on a storage device, the system comprising:

a receiver for receiving a signal carrying programming;

a recording device coupled to said receiver for selectively recording video data corresponding to a program of said programming based on a recording tag assigned to said program and recording rules that determine whether said program is to be recorded, wherein said recording device includes means for:

receiving a request by a viewer for the system to record the program on the storage device;

upon receiving the request from the viewer to record the program, selectively assigning a tag to the program, wherein said tag is used by the system to control, at least in part, recording of said program, said tag including at least one of a guaranteed tag, an optional tag or a priority tag, each of the guaranteed, optional and priority tags corresponding to different criteria for recording said program;

applying the recording rules to said tag to determine whether the request to record said program is to be fulfilled; and

if it is determined that the request is to be fulfilled, automatically programming the system to record video data associated with the program on the storage device;

a storage device coupled to said recording device for storing said recorded video data based on a storage tag assigned to said recorded video data and storage rules that determine whether said recorded video data is to be deleted; and

an interface coupled to said recording device for informing a viewer.

25. (Original) A system as recited in claim 24, wherein said interface informs said viewer as to an amount of space that is available on said storage device for storing video data.

Application No. 69/781,111
Amendment 'B' dated March 14, 2006
Reply to Office Action mailed December 14, 2005

26. (Original) A system as recited in claim 24, wherein said interface informs said viewer of recording said video data corresponding to said program on said storage device.

27. (Original) A system as recited in claim 24, wherein said interface informs said viewer of deleting said recorded video data from said storage device.

28. (Original) A system as recited in claim 24, wherein said interface informs said viewer as to why only a portion of said video data was recorded on said storage device.

29. (Previously Presented) A method as recited in claim 7, wherein subsequent to the user being notified there is insufficient space to record the first program, the method further includes changing the priority of the first tag and recording the first program over other programming stored in the storage device.

30. (Previously Presented) A method as recited in claim 1, wherein the first tag includes the priority tag as well as at least one of the optional tag and the guaranteed tag.
